

partial / full freeze vs S4D:
+12–18 / +20–23 pp (forward)
→ input-independent
coefficients suffice

partial host, forward:
+9 / +16 / +27 pp
(resolved at −6 dB only);
reverse: resolved at every level

mult. − add. at −6 dB:
+23 (full) / +27 (partial) pp;
additive vs gateless:
not resolved

Conditional on this block, testbed and budget: input-independent scan coefficients suffice; gate cost grows with noise only in the forward fully frozen block.
